Training Information

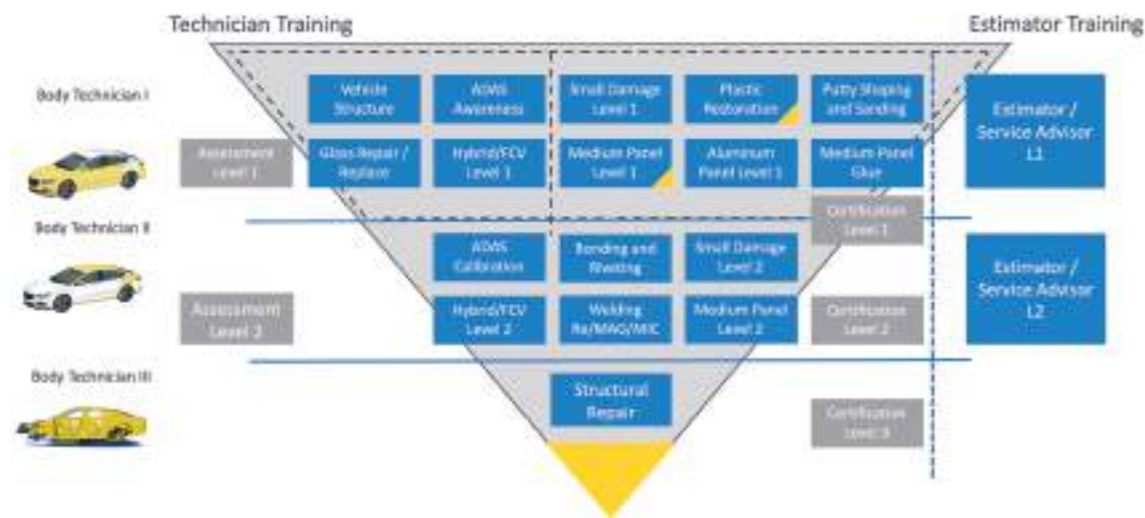

Effective Training

BETAG offers a comprehensive body repair training and development program suitable for estimators and technicians of all experience levels.

Training Objectives

Developing the knowledge & skills of estimators and technicians with effective training delivers fast, measurable operational and financial performance improvements.

Estimation & Technician Training Program

Business Benefits Include:

- Increasing productivity of technicians.
- Improving repair/replace ratio - to increase gross profit & bottom line performance.
- Improving overall quality of repairs and reducing re-works.
- Increasing 'Touch Time' and reducing 'Key to Key' times.
- Utilizing ROI from improving the non-structural repair process to invest in training and equipment for more capital-intensive structural repairs.

eLearning

BETAG has developed a range of eModules and live streamed eClasses to support its in person, instructor led training courses.

Used in combination, these three learning formats enable OEMs and repairers to cost effectively assess, develop and maintain estimators' and technicians' knowledge & skills without compromise to learning objectives.

This is achieved by:

- Enhancing knowledge retention and embedding behaviour change, by creating an easily accessible resource library that estimators and technicians can continue to access after completion of training.
- Minimizing loss of workshop productivity by enabling estimators and technicians to complete some learning elements remotely before attending in person training.
- Reducing associated travel and subsistence costs.

"BETAG's training has been one of the most impactful things I've seen at the production level"

Ed Dietz
Lefler Collision & Glass, IN

"BETAG's hands on training has broadened our technician's perspective of how to repair metal. And the aluminum training was a game changer."

Dan Koenigsberg
Anderson Body Shop, MD
